

GIGGO

A Bangladesh-first freelance marketplace connecting clients with skilled professionals.

Field	Details
Course	Web Programming & Mobile Applications Development
Institution / Department	Khulna University, CSE Discipline
Supervisor	Prof. Dr. Kazi Mashudul Alam
Team Members	Md. Farid Hossen Rehad, ID: 220222 Md. Sarafat Karim, ID: 220216
Repository	https://github.com/Schr0Smi1ey/cseku_26_wpl_Giggo.git

1. Project Scope

Purpose

Giggo is a planned Bangladesh-first freelance marketplace connecting clients with skilled professionals through profiles, jobs, proposals, hiring, and communication. The course MVP delivers a reviewable hiring journey while remaining suitable for later international expansion.

In Scope

- Role-based authentication and account management for clients, freelancers, and administrators.
- Freelancer profiles, portfolios, CVs, verification requests, and visible trust indicators.
- Client job management plus job browsing, search, filters, details, and saved jobs.
- Proposals, client shortlisting, hiring decisions, and basic contract status tracking.
- Participant messaging and role-specific dashboards for the hiring workflow.
- Advisory CV analysis through a replaceable AI provider with a development fallback.
- Human administrator review of verification requests.

Out of Scope

- Real payments, escrow, payouts, invoicing, taxation, or financial guarantees.
- Automated identity or skill verification and AI-driven hiring or banning decisions.
- Service packages, disputes, subscriptions, enterprise accounts, and production moderation.
- International localization, compliance, payments, and production-scale infrastructure.

2. Project Objectives

1. **Enable trusted role-based participation** - Provide secure access and appropriate permissions for clients, freelancers, and administrators.
2. **Present credible freelancer profiles** - Support structured experience, portfolios, CVs, verification requests, and distinct trust indicators.
3. **Support job discovery and hiring** - Let clients publish work and review proposals while freelancers find jobs, apply, and track outcomes.
4. **Provide a collaboration path** - Connect accepted proposals to basic contracts, dashboards, and direct communication without claiming escrow protection.
5. **Use AI assistance responsibly** - Offer advisory CV analysis through a replaceable provider while keeping human review authoritative.
6. **Produce a demonstrable MVP** - Deliver a focused browser workflow for controlled client and freelancer scenarios within the two-person scope.

3. Team Roles and Responsibilities

Md. Sarafat Karim - Requirements, Frontend & Project Coordination

Primary responsibilities:

- Requirements analysis and SRS refinement.
- Project scope, objectives, and MVP acceptance validation.
- Frontend implementation for authentication, profiles, marketplace, dashboards, and responsive user flows.
- Frontend-backend integration, project coordination, and documentation consistency.
- Usability and integration testing, plus peer review of teammate work.

Md. Farid Hossen Rehad - Backend, Marketplace Logic & AI Integration

Primary responsibilities:

- Backend API, authentication, role authorization, and database implementation.
- Profile, verification, job, proposal, contract, and messaging service logic.
- Data validation, access-control enforcement, file handling, and marketplace workflow integrity.
- AI provider integration for advisory CV analysis and development fallback behavior.
- Backend and integration testing, plus peer review of teammate work.

Shared Responsibilities

The following responsibilities are shared by both members and do not constitute a separate project role:

- Technical design decisions.
- Git collaboration.
- Testing and debugging.
- Final integration.
- Code review.
- Final project demonstration.
- Final documentation review.
